

# International Journal of Biological Sciences

The cover feature graphic is a collage of biological and medical illustrations. On the left, there is a circular image of a cell or tissue section. In the center, there are several text labels: 'MicroRNA' with a small blue image of a microRNA molecule, 'LncRNA' with a small image of a long non-coding RNA molecule, 'DNA methylation' with a diagram showing a CpG island and a gene, and 'Histone modification' with a diagram of a nucleosome and histone H4. On the right, there is a large image of a pill bottle spilling various colored pills, and the text 'Epigenetic therapeutics' written in a cursive font. A legend for 'DNA Methylation' indicates that white circles represent 'non-methylated' and black circles represent 'methylated' CpG islands, with arrows showing that methylation leads to 'Suppressed gene expression'.
