

Supplemental figure 1. *S27D does not affect the interaction between p120-catenin and VE-cadherin.* HUVECs were incubated with S27D for 60 minutes and VE-cadherin was immunoprecipitated (IP). Samples were analyzed by Western blotting for the presence of p120-catenin (IB). Results showed that S27D did not dissociate p120-catenin from VE-cadherin.
