

Supplementary Figures

Figure S1. CD spectrum of PcpA (1 mg/mL) after 4 days incubation in 50 mM phosphate solution, pH 13.0. The spectrum is an average of 10 spectral measurements and smoothed with a 10 point Savitsky-Golay algorithm.

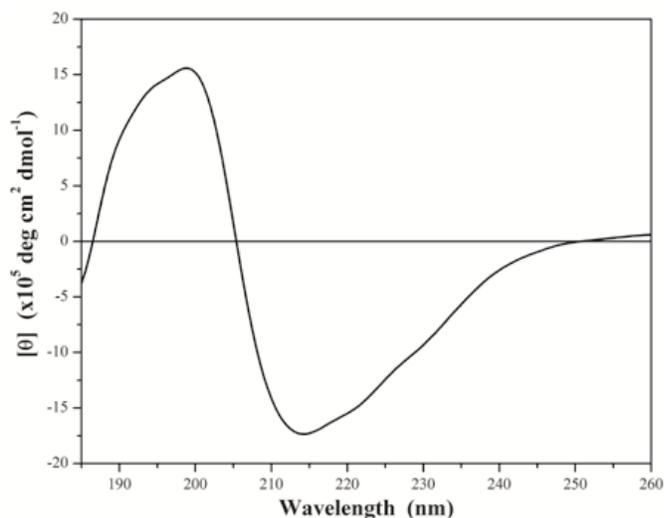

Figure S2. The stable dichlorosemiquinone radical formed from rapid oxidation of 2,6-dichlorohydroquinone (less than 30 seconds) was revealed by room temperature EPR .
