2. Table S2 DNA demethylation of OCT4, SOX2 and NANOG promote region
DNA demethylation of OCT4, SOX2 and NANOG promote region. The fragment sequences of promoter regions of OCT4, SOX2 and NANOG were listed in above Table S2. The “CG” sites in yellow were detected for DNA demethylation analysis, respectively 5 sites for OCT4 promoter region, 19 sites for SOX2 promoter region, 8 sites for NANOG promoter region.

3. Table S3. Neurological Severity Scores, NSS

Neurological Severity Scores, NSS. Neurological function in the rats was assessed using the Neurological severity scores. The lower NSS Score is, the less severe ischemia will be.

Grading	Point (normal = 0; maximum = 5)
Normal walk	0
Flexion of forelimb (raising the rat by the tail)	1
Circling toward the paretic side (walking)	2
Falling down to the paretic side (walking)	3
No spontaneous walking, decreased consciousness	4
Ischemia-related deaths	5

3. Table S4. Beam Balance Test (BBT)

Beam Balance Test (BBT). Neurological function in the rats was assessed using the Beam Balance Test. The lower BBT Score is, the less severe ischemia will be.

Grading	Point (normal = 0; maximum = 6)
Balances with steady posture	0
Grasps side of beam	1
Hugs the beam and one limb falls down from the beam	2
Hugs the beam and two limbs fall down from the beam, or spins on beam (>60 s)	3
Attempts to balance on the beam but falls off (>40 s)	4
Attempts to balance on the beam but falls off (>20 s)	5
Falls off: no attempt to balance or hang on to the beam (>20 s)	6
