

Supplemental Information

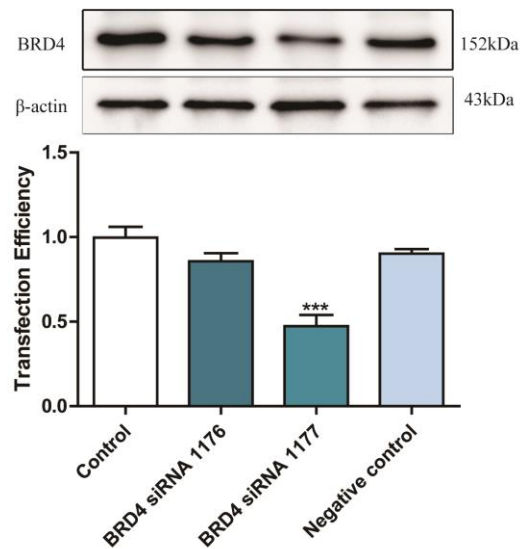

Fig. S1 BRD4 siRNA 1176 and BDR4 siRNA 1177 were added to THP-1 cells for 72 h. Then, cell lysates were used to perform western blot for BRD4 expression in THP-1 cells. Quantification of the protein level of BRD4 was expressed as the ratio (in percentage) of control group. The untreated THP-1 cells were used as a control. Data are shown as means \pm SD (n=3). *** P <0.001 vs. control group.
