Figure S1: Expression of circMETTL3 in the breast cancer cell lines and MCF-10A by qRT-PCR. Data were shown as mean ± SD, *p <0.05, **p <0.01, ***p<0.001.

Figure S2: A-B: The growth curves of ZR-75-1 (A) and SUM1315 (B) cell lines transfected with indicated vectors were evaluated by CCK-8 assays. C-D: Cell proliferation was determined by colony formation (C) and EdU assays (D) in ZR-75-1and SUM1315 cell lines transfected with indicated vectors. Data were shown as mean ± SD, *p <0.05, **p <0.01, ***p<0.001.

Figure S3: A-B: Overexpression of circMETTL3 had no effect on METTL3 mRNA expression (A) and protein level (B) in the tumors of mice treated with vector or overexpression-circMETTL3. Data were shown as mean ± SD, *p <0.05, **p <0.01.

Figure S4: A-C: The wound healing assays were used to detect the cell migration ability after transfecting breast cancer cells. Scale bar, 200 μm. D-G: Migration (D and F) and invasion (E and G) abilities of breast cancer cells transfected with indicated vectors were determined by transwell assay. Scale bar, 100 μm. Data were shown as mean ± SD, *p <0.05, **p <0.01, ***p<0.001.

Figure S5: A-B: Overexpression of circMETTL3 decreased expression of

miR-31-5p (A) and increased CDK1 expression (B-C) in in the animal tumors.

Data were shown as mean ± SD, *p <0.05, **p <0.01, ***p<0.001.

Figure S6: A-B: METTL3 increased CDK1 expression in the absence of circMETTL3 in ZR-75-1 (A) and SUM1315 (B). Data were shown as mean ± SD, *p <0.05.
