**Figure S1.**

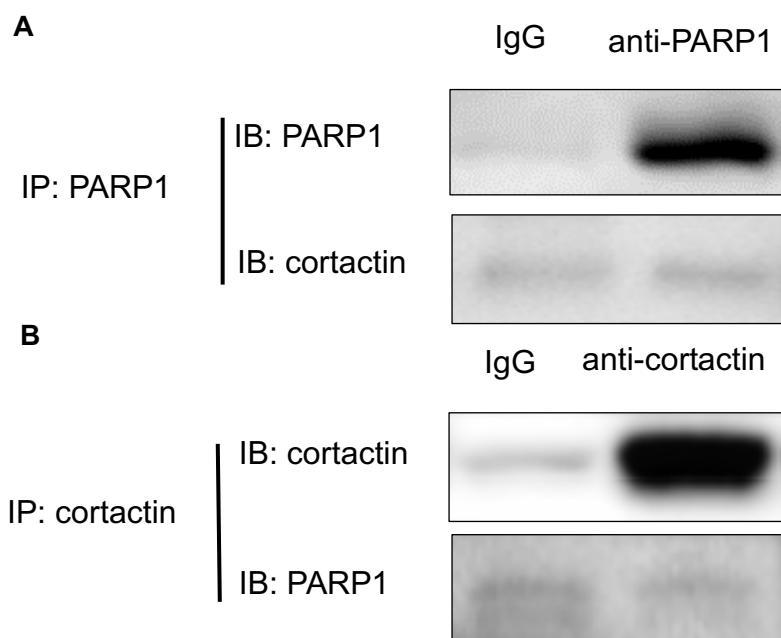

**Supplementary Fig 1. Olaparib enhances the migratory and invasive functions of osteosarcoma cells *in vitro*.** **(A)** Migratory properties of U2OS and MG-63 cells treated with DMSO or olaparib were tested using wound healing assays. Results showed that olaparib treated OS cells migrated faster compared to the control group. **(B)** Invasive behaviors in collagen-type-IV gels of U2OS and MG-63 cells with DMSO or olaparib were observed in chamber invasion assay. The relative invaded cells compared to control was counted by statistical. Results showed that a higher number of olaparib treated OS cells could invade through the membrane compared to the control group.

## Figure S2.

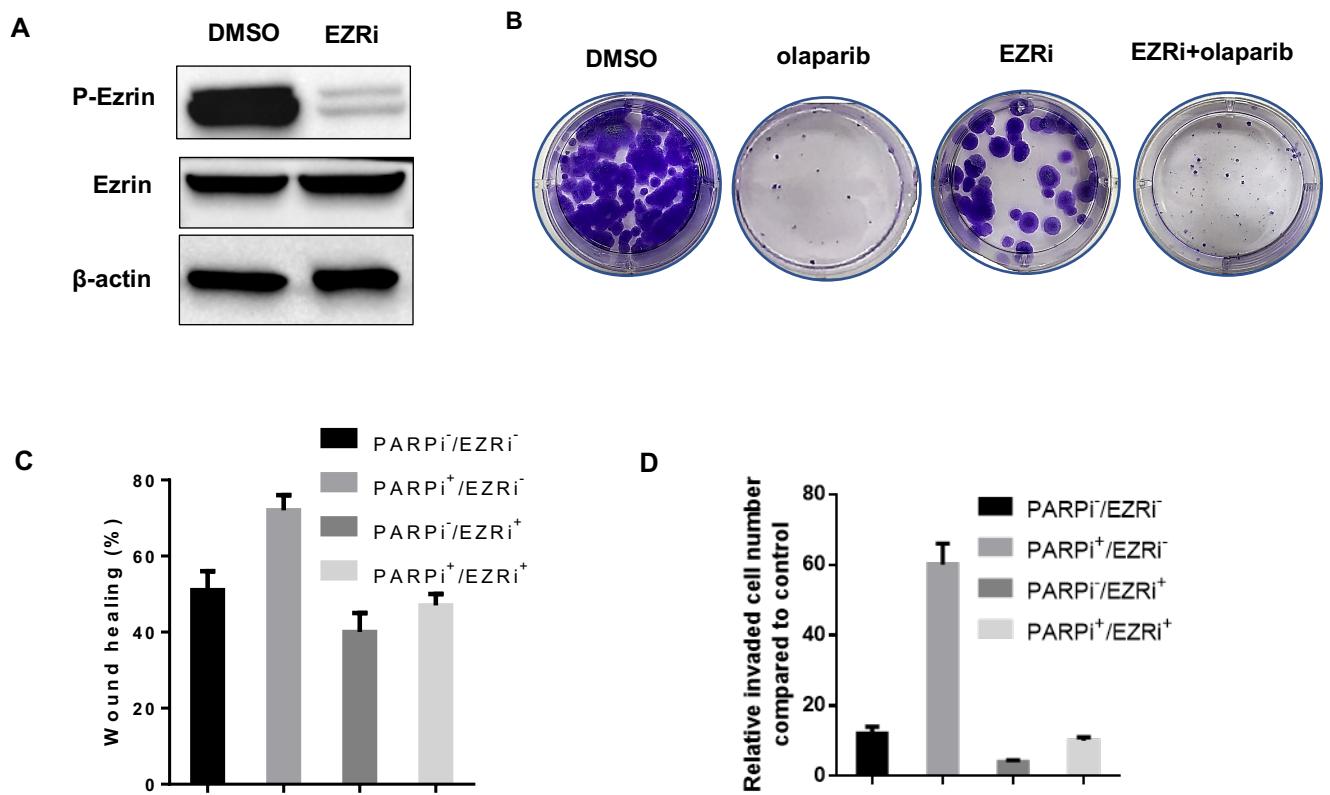

**Supplementary Fig 2. Olaparib enhances the adhesive property of osteosarcoma cells *in vitro*.** Representative diagrams for stained cells. DMSO or olaparib treated OS cells were incubated with BSA, fibronectin or collagen I coated wells for 1 h. Adherent cells were fixed and stained. **(A)** Representative diagrams for stained cells. Scale bar = 50  $\mu$ m. **(B)** Quantification of the adherent cells.

## Figure S3.

**Supplementary Fig 3. PARP1 has no interaction with cortactin.** 143B cell lysate was subjected for co-IP with anti-PARP1, anti-cortactin, or control IgG antibodies followed by western blotting with the indicated antibodies. **(A)** PARP1 antibody could not pull down cortactin protein. **(B)** Cortactin antibody could not pull down PARP1 protein. There was no interaction between PARP1 and cortactin.

## Figure S4.

**Supplementary Fig 4. Ezrin inhibitor could inhibit proliferation, migration and invasion of OS cells *in vitro*.** (A) Western blot analysis of ezrin inhibitor treatment could inhibit the activation of ezrin. (B) The proliferation of 143B cells treated with DMSO, ezrin inhibitor, PARP inhibitor, ezrin inhibitor and PARP inhibitor was determined by colony formation assay. (C) Wound healing assay (143B cell line) treated DMSO, ezrin inhibitor, PARP inhibitor, or the combination of ezrin inhibitor and PARP inhibitor showed that ezrin inhibition could rescue olaparib induced migration. (D) Transwell assay of OS cells treated with or without ezrin inhibitor, PARP inhibitor, or the combination of ezrin inhibitor and PARP inhibitor showed that ezrin inhibition could rescue olaparib induced invasion.
