

Figure S1-1.

Rora deficiency increases B cell proliferation. (A) A summary of the *Rora* conditional knockout mouse strategy. (B) Southern blot results for the *Rora* alteration, which indicates those with correct recombinant, random insertion and wild type genotyping as indicated. (C) Mouse crossing strategy to produce *Rora* deficient HSCs and the genotyping results as indicated.

Figure S1-2.

Rora deficiency increases B cell proliferation. (A) PBMC cells isolated from *Rora*^{loxp/loxp} and *Mx-1-Cre/Rora*^{loxp/loxp} mice post Pipc treatment for 4 weeks. The deletion efficiency of *Rora* was examined using immunofluorescence staining with a *Rora* antibody, *Rora* (green), DAPI, and merged. (B and C) The total numbers of B cells (B220⁺) in BM and SPL from *Rora*^{loxp/loxp} and *Mx-1-Cre/Rora*^{loxp/loxp} mice at four, eight, and 12 weeks post Pipc injection. 3-5 mice were included in each group.

Figure S4.

The activation of *Rora* with CS inhibits B cell proliferation and differentiation. (A-C) total number of mature B cells (B220⁺) in the BM, SPL and PB of 10-week old mice treated with CS for seven days. Each independent experiment was repeated three times. All values were represented using the mean \pm SEM, for which the Mann Whitney U test was used to evaluate the significance with a threshold of $P < 0.05$ (*).

Figure S6.

Gene expression signatures of *Rora* deficiency BCR/ABL1 transduced pro-B cells. (A) Heat maps showing the expression changes of top 98 genes and hierarchical clustering of the genes in *Rora* deficiency BCR/ABL1 transduced pro-B cells from the two biological replicates. Comparison of the global gene transcription profiles of *Rora* deficiency leukemia cells at week four Pipc injection. (B-E) Gene Set Enrichment Analysis shows enrichment of gene sets upregulated in *Rora* deficiency leukemia cells. (F) Expression level of genes from selected gene sets were confirmed using quantitative qPCR. Data are expressed as the mean \pm SD of triplicate experiments performed at one time.

Figure S7.

High expression of Rora prevented BCR/ABL1-transduced B-ALL procession *in vivo*.

Viral transduction efficiencies of BCR/ABL or BCR/ABL1-Rora viral stock on WT BM cells for B-ALL mouse model.
