

# The m6A-induced lncRNA CASC8 promote proliferation and chemoresistance via upregulation of hnRNPL in esophageal squamous cell carcinoma

## Supplemental figure

Figure S1. The CASC8 expression in esophageal carcinoma cells in CCLE database.

Figure S2. siRNA against CASC8 was assessed by qRT-PCR in YES-2 and KYSE-450 cells.

Figure S3. The degradation rates of hnRNPL in CASC8 silencing groups were significantly higher than that in control cells at 6h and 8h.
