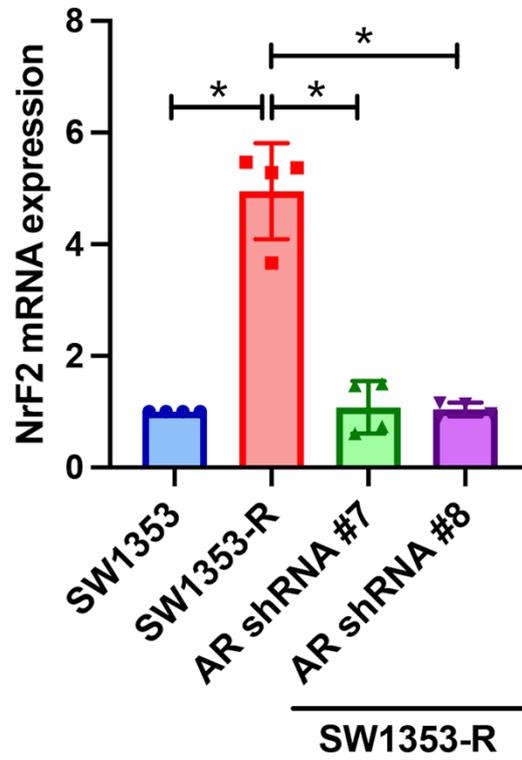

Figure S1. Knockdown AR reduces the NrF2 expression in cisplatin-resistant SW1353-R cells. The mRNA levels of NrF2 in indicated cells were examined by qPCR.

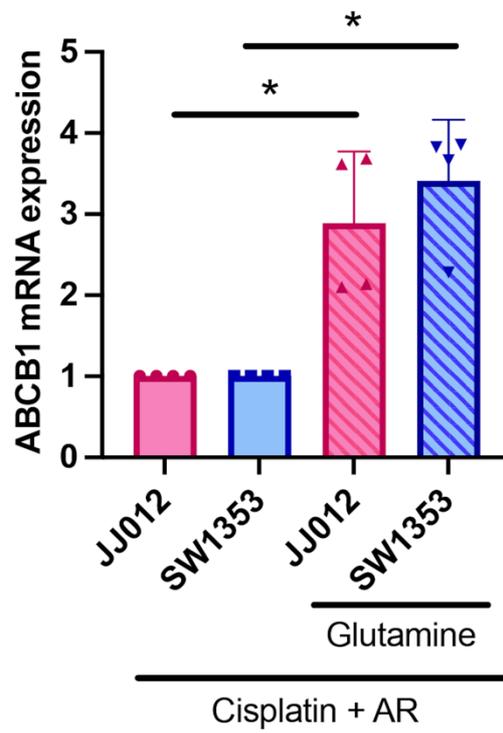

Figure S2. Glutamine supplement enhances AR to upregulate ABCB1. Cells were stimulated with AR (50 $\mu\text{g}/\text{ml}$) for 24 h, then incubated with medium containing glutamine (2.5 mM) and cisplatin (1 μM), the mRNA of ABCB1 was examined by qPCR.
