**Supplementary Figure S1.** (A) The expression of SNX17 in tumor tissues compared with paired corresponding noncancerous tissues was analyzed using data sets from TCGA. (B) Patients with high expression levels of SNX17 had shorter overall survival than patients with low expression levels, as determined using data sets from TCGA.

Expression of SNX17 in LIHC based on nodal metastasis status

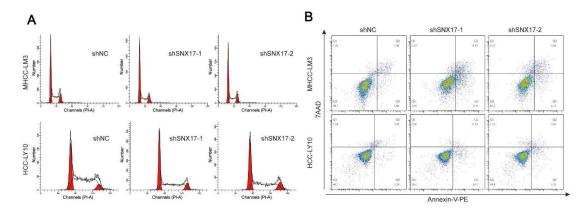

Supplementary Figure S2. SNX17 expression in noncancerous liver tissues,

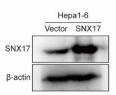

HCC tissues and metastatic cancer tissues was analyzed via TCGA data.

**Supplementary Figure S3.** (A-B) The expression of SNX17 was analyzed by Western blotting (A) and qRT-PCR (B) in HCC cell lines. (C) SNX17 overexpression and knockdown efficiency was validated using qRT-PCR. (D-E) The effect of SNX17 overexpression and knockdown on HCC cell proliferation was assessed by colony formation assays (D) and EdU assay (E).

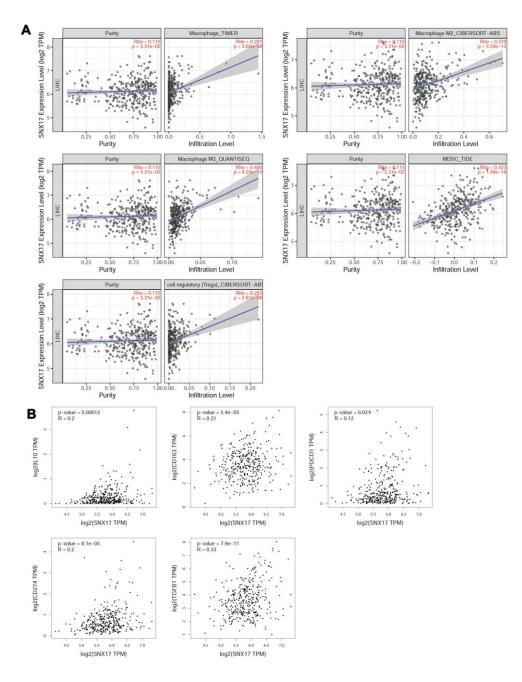

**Supplementary Figure S4.** (A) The effect of SNX17 knockdown on HCC cell cycle was assessed by flow cytometry. (B) The effect of SNX17 knockdown on HCC cell apoptosis was assessed by flow cytometry.

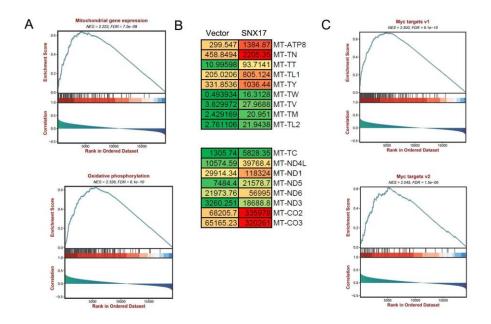

Supplementary Figure S5. SNX17 overexpression efficiency was validated

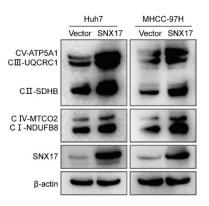

using Western blotting in Hepa1-6 cells.

**Supplementary Figure S6**. SNX17 may affect the tumor microenvironment. (A) The relationship between SNX17 and immunosuppressive microenvironment in HCC was analyzed using TCGA data. (B) The relationship between SNX17 and immunoregulator molecules in HCC was analyzed using TCGA data.

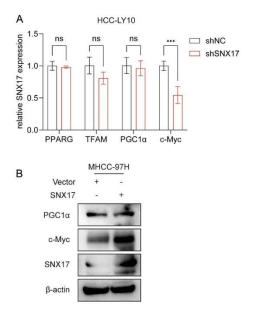

**Supplementary Figure S7.** (A) GSEA analysis showed that the SNX17 expression was positively correlated with genes related to "Mitochondrial gene expression" and "Oxidative phosphorylation". (B) Heat map of differentially regulated genes in the mitochondrial gene set in vector and SNX17 overexpression HCC cells. (C) GSEA analysis showed that the SNX17 expression was positively correlated with genes related to "Myc target V1" and "Myc target V2".

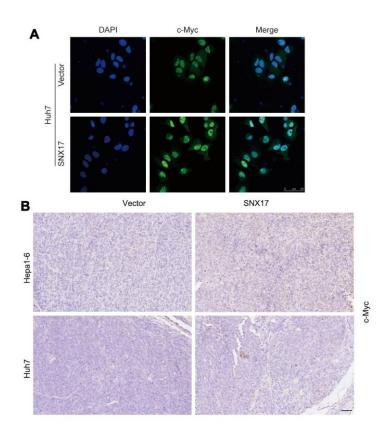

Supplementary Figure S8. OXPHOS complexes were detected by WB in

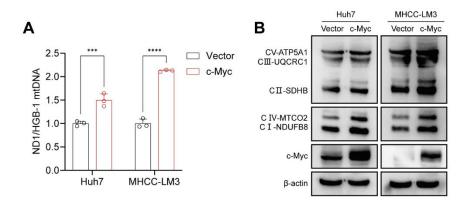

SNX17 overexpression HCC cells.

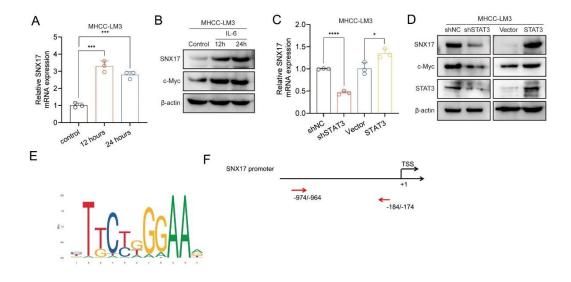

Supplementary Figure S9. (A) The expression of PPARG, TFAM, PGC-1 $\alpha$  and c-Myc was assessed by qPCR in SNX17 knockdown HCC-LY10 cells. ns: not significant. \*\*\*P<0.001. (B) The expression of SNX17, PGC-1 $\alpha$  and c-Myc was assessed by WB in SNX17 overexpression MHCC-97H cells.

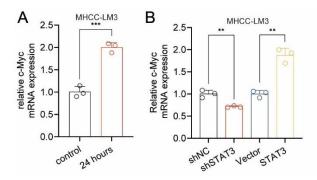

Supplementary Figure S10. SNX17 increased nuclear localization of c-myc in HCC cells. (A) The effects of SNX17 on the cellular localization of c-Myc in Huh7 cells. (B) The expression of c-Myc in xenograft tumor tissues from Huh7-SNX17 or isograft tumor tissues from Hepa1-6 SNX17 was detected by IHC. Bar=50  $\mu$ M.

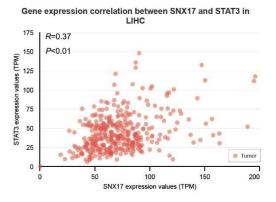

**Supplementary Figure S11**. The effects of c-Myc on the content of mtDNA and expression of OXPHOS complexes. (A) The content of mtDNA was measured by qPCR in c-Myc overexpression HCC cells. (B) OXPHOS complexes were detected by WB in c-Myc overexpression HCC cells. \*\*\*P<0.001; \*\*\*\*P<0.0001.

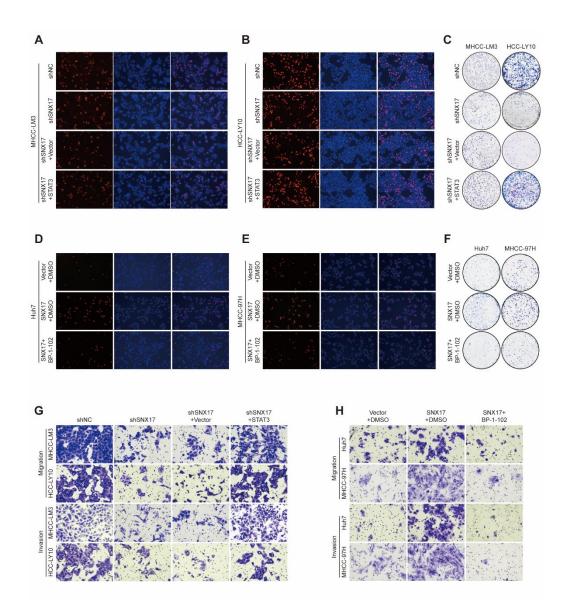

**Supplementary Figure S12.** (A) The expression of SNX17 was measured by qPCR in MHCC-LM3 cells treated with IL-6. (B) The expression of SNX17 and c-Myc was measured by WB in MHCC-LM3 cells treated with IL-6. (C) The expression of SNX17 was measured by qPCR in MHCC-LM3 transfected with STAT3 or shSTAT3. (D) The expression of SNX17 and c-Myc was measured by WB in MHCC-LM3 transfected with STAT3 or shSTAT3. (E) STAT3 binding motif. (F) Prediction of binding sites of STAT3 in the SNX17 promoter. \*P<0.05; \*\*\*P<0.001; \*\*\*\*P<0.0001.

**Supplementary Figure S13. (**A) The expression of c-Myc was measured by qPCR in MHCC-LM3 cells treated with IL-6. (B) The expression of c-Myc was measured by qPCR in MHCC-LM3 cells transfected with STAT3 or shSTAT3. \*\*P<0.01; \*\*\*P<0.001.

**Supplementary Figure S14.** The correlation between SNX17 and STAT3 using data sets from TCGA LIHC data.

**Supplementary Figure S15.** SNX17 regulates HCC cell functions via the STAT3 pathway. (A-C) SNX17-knockdown HCC cells were transfected with STAT3 or vector. Cell proliferation was evaluated by EdU assay (A and B) and colony formation assays (C). Cell migration and invasion were evaluated by transwell assay (G). SNX17-overexpressing HCC cells were treated with BP-1-102 or DMSO as indicated. Cell proliferation was evaluated by EdU assay (D-E) and colony formation assays (F). Cell migration and invasion were evaluated by transwell assay (H).
