

Supplementary Materials

1

2 Supplementary Figures

3

4 **Figure S1. Identification of RNF25 as a negative regulator of apoptosis. Related**

5 **to Figure 1. A** Dose-response survival curves of control and RNF25-overexpressing

6 SW839 (**left**) and OS-RC-2 (**right**) cells exposed to increasing concentrations of

7 ABT-199 (mean \pm SEM, n = 3). **B, C** Annexin V/7-AAD-FC analysis of control and

8 RNF25-overexpressing SW839 and OS-RC-2 cells treated with DMSO or ABT-199

9 (20 μ M) for 24 hours (**B**), with quantification data shown in (**C**) (mean \pm SD, n = 3,

10 two-tailed unpaired Student's *t*-test). **D** Western blot analysis of WCL derived from

11 control and RNF25-overexpressing SW839 and OS-RC-2 cells treated with DMSO or

12 ABT-199 (20 μ M) for 24 hours. Relative protein levels of RNF25, cIAP2 and Bcl-2

13 are shown. **E** RT-qPCR analysis of control and RNF25-overexpressing SW839 (**top**)

14 and OS-RC-2 cells (**bottom**) treated with DMSO or ABT-199 (20 μ M) for 24 hours

15 (mean \pm SD, n = 3, two-tailed unpaired Student's *t*-test). **F** Annexin V/7-AAD-FC

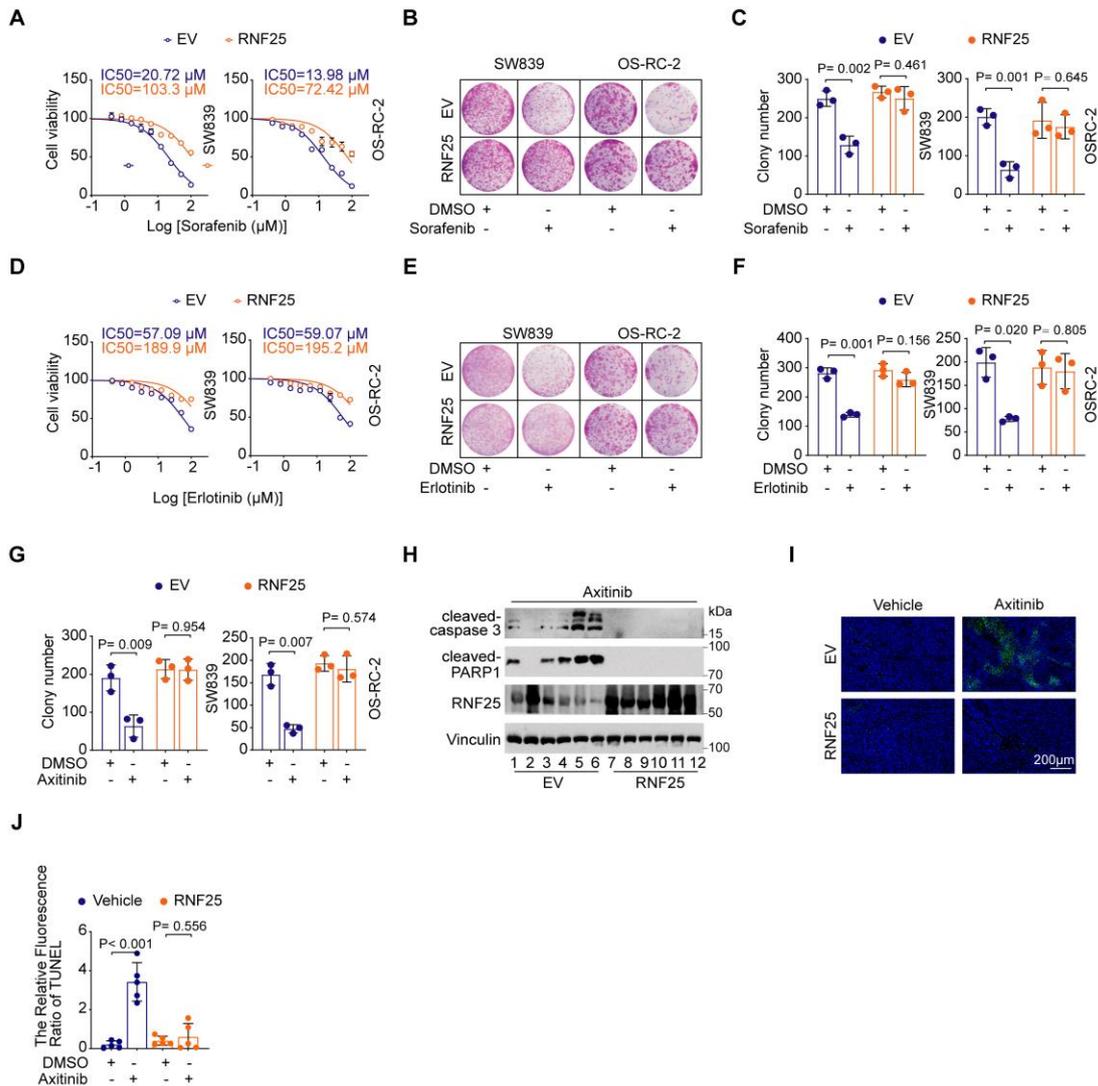

16 analysis of control and RNF25-knockdown SW839-R and OS-RC-2-R cells treated

17 with DMSO or ABT-199 (20 μ M) for 24 hours. **G** RT-qPCR analysis of control and

18 RNF25-knockdown SW839-R cells (**left**) and OS-RC-2-R cells (**right**) treated with

19 DMSO or ABT-199 (20 μ M) for 24 hours (mean \pm SD, n = 3, two-tailed unpaired

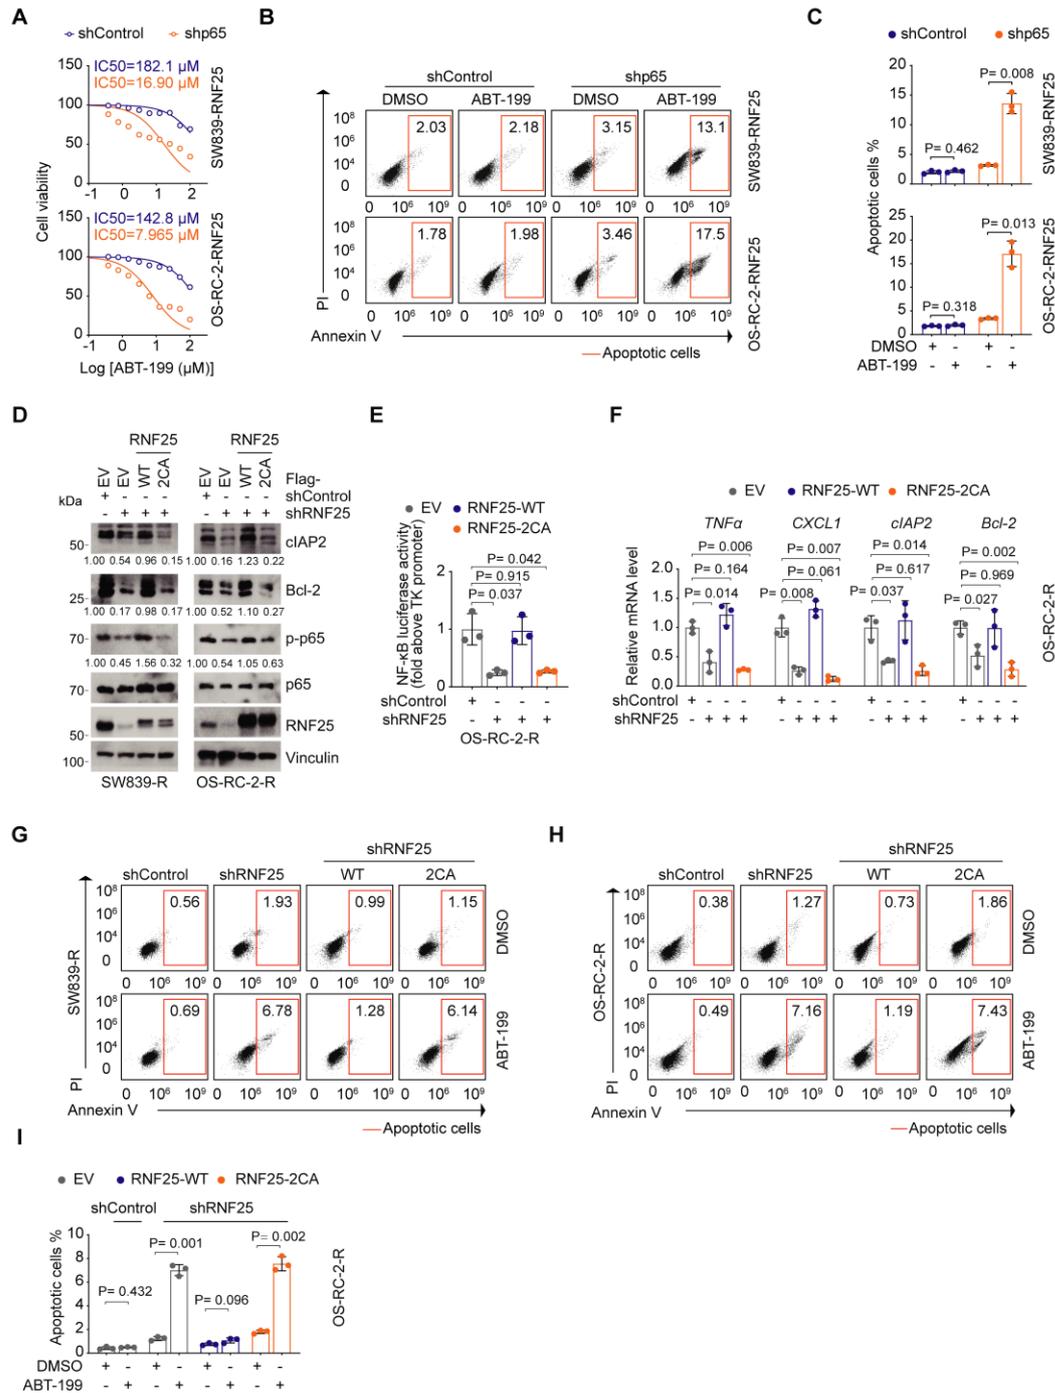

20 Student's *t*-test). All experiments were independently performed in triplicate, yielding
 21 consistent results.

22

23 **Figure S2. RNF25 overexpression induces tyrosine kinase inhibitor resistance in**
 24 **RCC. Related to Figure 1. A** Dose-response survival curves of control and RNF25-
 25 overexpressing SW839 (**left**) and OS-RC-2 (**right**) cells exposed to increasing
 26 concentrations of sorafenib (mean±SEM, n = 3). **B, C** Colony formation assays were
 27 performed in control and RNF25-overexpressing SW839 and OS-RC-2 cells treated
 28 with DMSO or sorafenib (1 μM). Representative colonies are shown in (**B**) with
 29 quantification data shown in (**C**) (mean±SD, n = 3, two-tailed unpaired Student's *t*-
 30 test). **D** Dose-response survival curves of control and RNF25-overexpressing SW839
 31 (**left**) and OS-RC-2 (**right**) cells exposed to increasing concentrations of erlotinib
 32 (mean±SEM, n = 3). **E, F** Colony formation assays were performed in control and

33 RNF25-overexpressing SW839 and OS-RC-2 cells treated with DMSO or erlotinib
34 (10 μ M). Representative colonies are shown in (E) with quantification data shown in
35 (F) (mean \pm SD, n = 3, two-tailed unpaired Student's *t*-test). G Quantification data of
36 Colony formation assays in control and RNF25-overexpressing SW839 and OS-RC-2
37 cells treated with DMSO or axitinib (5 μ M) (mean \pm SD, n = 3, two-tailed unpaired
38 Student's *t*-test). H Western blot analysis of WCL derived from control and RNF25-
39 overexpressing tumors in Fig 1M. I, J Representative images of TUNEL assays in
40 SW839 tumors from each treatment group are shown in Fig. 1M (I). Scale bar:
41 200 μ m. Quantification of relative TUNEL fluorescence intensity is presented in (J)
42 (mean \pm SD, n = 5; two-tailed unpaired Student's *t*-test). All experiments were
43 independently performed in triplicate, yielding consistent results.

44

45 **Figure S3. NF-κB activation is necessary for RNF25-mediated anti-apoptosis.**

46 **Related to Figure 2. A** Dose-response survival curves of control and p65-knockdown

47 RNF25-overexpressing SW839 (**left**) and OS-RC-2 (**right**) cells exposed to

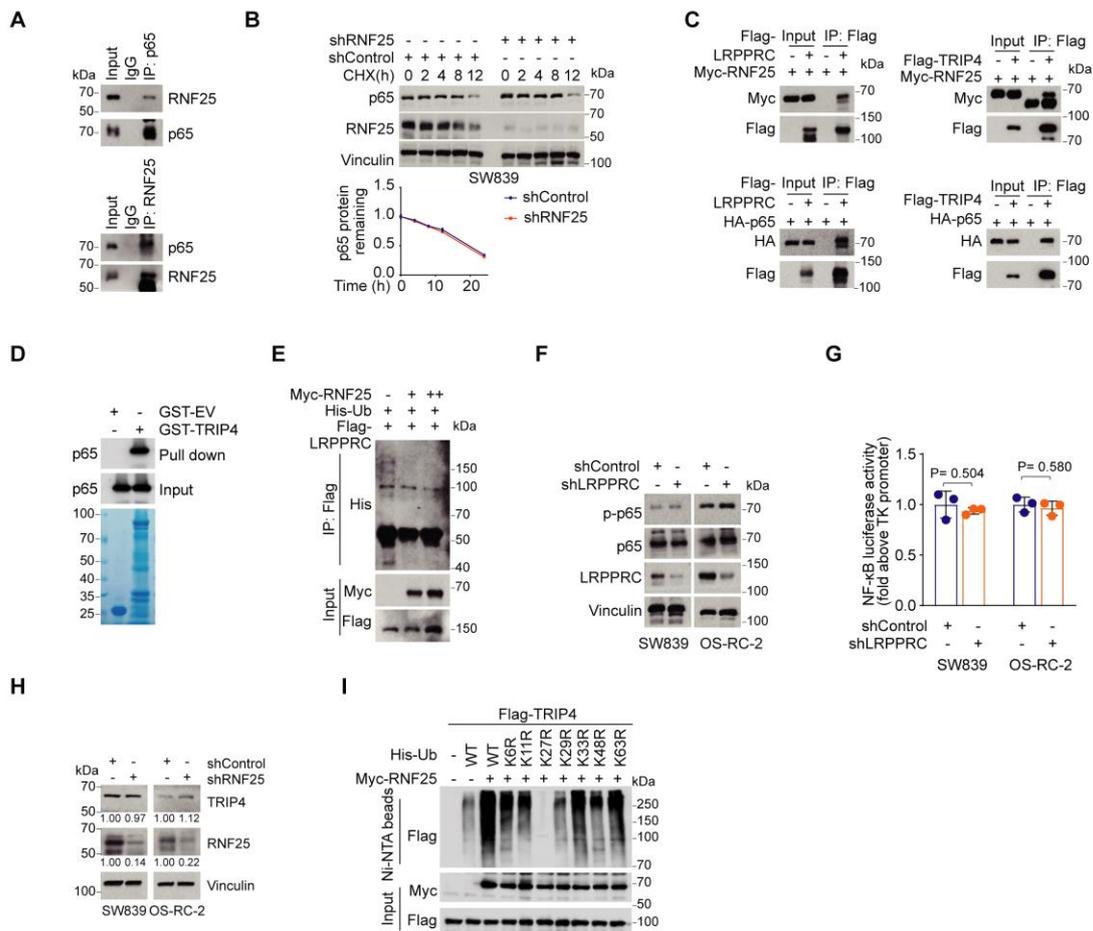

48 increasing concentrations of ABT-199 (mean ± SEM, n = 3). **B, C** Annexin V/7-

49 AAD-FC analysis of p65-knockdown RNF25-overexpressing SW839 and OS-RC-2

50 cells treated with DMSO or ABT-199 (20 μM) for 24 hours (**B**), with quantification

51 data shown in (**C**) (mean±SD, n = 3, two-tailed unpaired Student's *t*-test). **D** Western

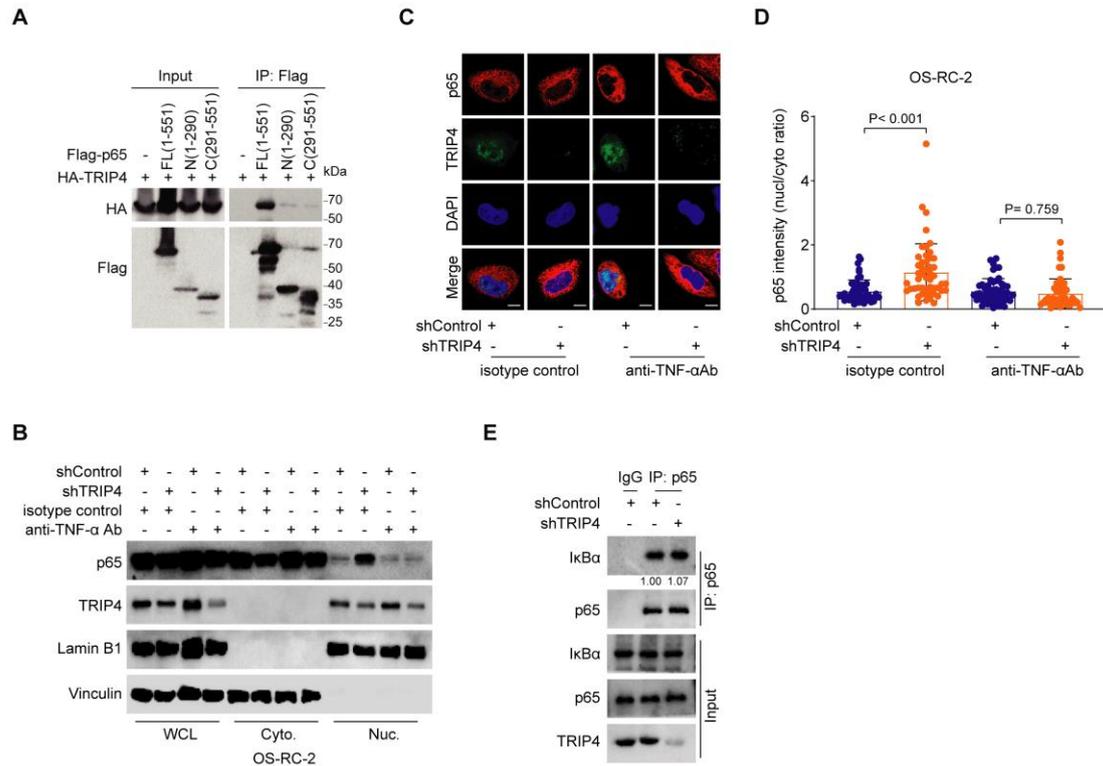

52 blot analysis of WCL derived from RNF25-knockdown SW839-R and OS-RC-2-R
 53 cells infected with the indicated viral constructs. Relative protein levels of p-p65, Bcl-
 54 2 and cIAP2 are shown. **E, F** Dual luciferase reporter assay (**E**) and RT-qPCR (**F**)
 55 were performed in RNF25-knockdown OS-RC-2-R cells infected with the indicated
 56 viral constructs (mean \pm SD, n = 3, two-tailed unpaired Student's *t*-test). **G** Annexin
 57 V/7-AAD-FC analysis of RNF25-knockdown SW839-R cells infected with the
 58 indicated viral constructs treated with DMSO or ABT-199 (20 μ M) for 24 hours. **H, I**
 59 Annexin V/7-AAD-FC analysis of RNF25-knockdown OS-RC-2-R cells infected with
 60 the indicated viral constructs treated with DMSO or ABT-199 (20 μ M) for 24 hours
 61 (**H**), with quantification data shown in (**I**) (mean \pm SD, n = 3, two-tailed unpaired
 62 Student's *t*-test). All experiments were independently performed in triplicate, yielding
 63 consistent results.

64

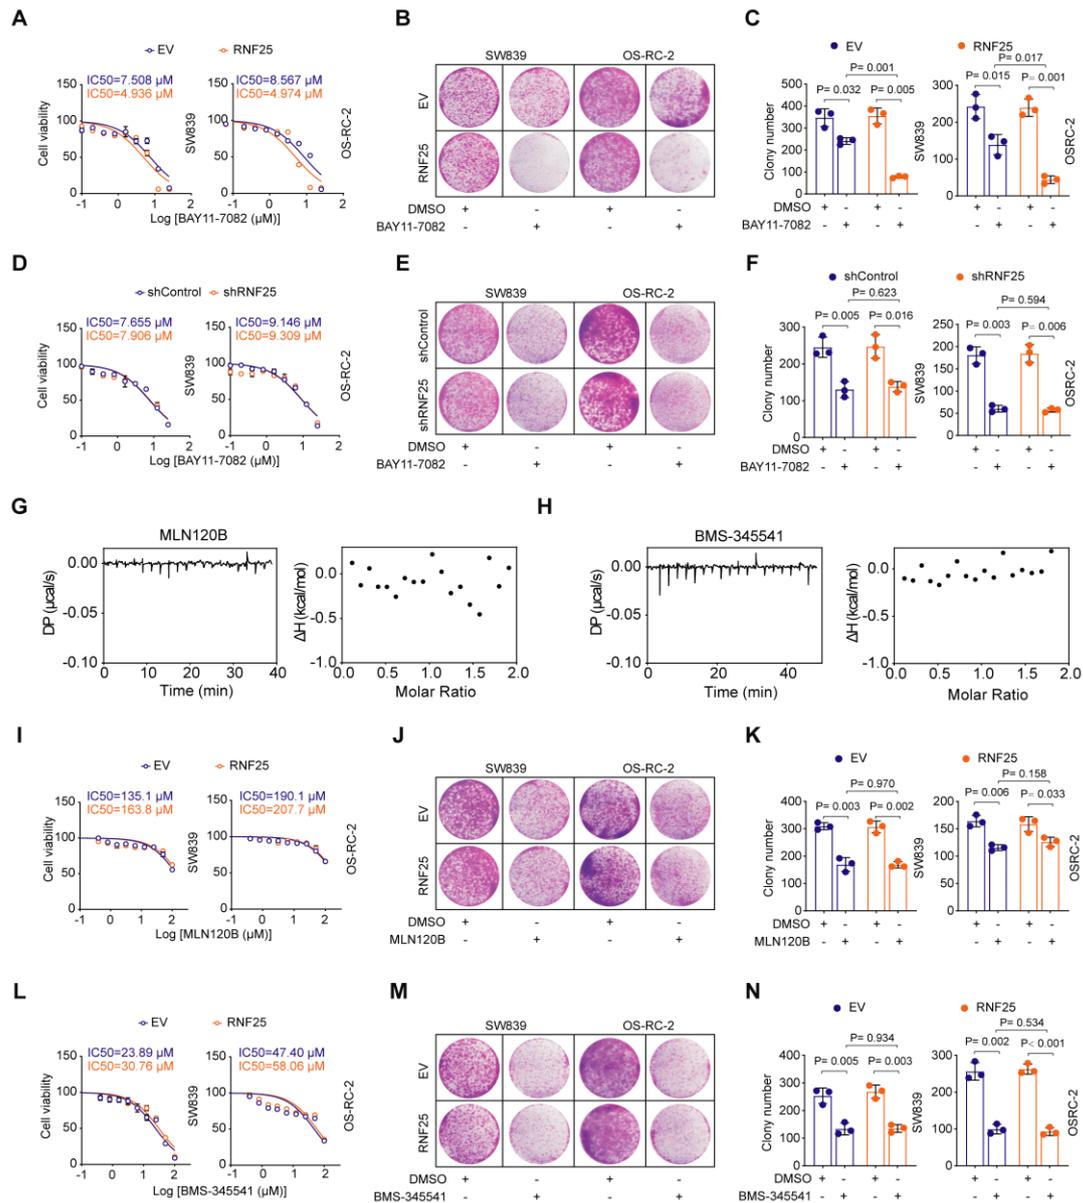

65 **Figure S4. TRIP4 is a ubiquitination target of RNF25 essential for NF- κ B**
 66 **activation. Related to Figure 3. A** Western blot analysis of input samples and anti-
 67 RNF25 or anti-p65 immunoprecipitates derived from SW839 cells. **B** Western blot

68 analysis of control and RNF25-knockdown SW839 cells treated with 200 $\mu\text{g}/\mu\text{l}$ CHX
69 at the indicated time points (**top**), and protein bands were quantified (**bottom**). **C**
70 Western blot analysis of input samples and IP derived from 293T cells transfected
71 with indicated plasmids. **D** Western blot analysis of p65 proteins in SW839 cells
72 pulled down by GST-EV or GST-TRIP4 recombinant proteins. **E** Western blot
73 analysis of input samples and IP derived from 293T cells transfected with Flag-
74 LRPPRC, His-UB and increasing amounts of Myc-RNF25. **F** Western blot analysis of
75 WCL derived from control and LRPPRC-knockdown SW839 and OS-RC-2 cells. **G**
76 Dual luciferase reporter assays were performed in control and LRPPRC-knockdown
77 SW839 and OS-RC-2 cells (mean \pm SD, n = 3, two-tailed unpaired Student's *t*-test). **H**
78 Western blot analysis of WCL derived from control and RNF25-knockdown SW839
79 and OS-RC-2 cells. Relative protein levels of RNF25 and TRIP4 are shown. **I**
80 Western blot analysis of WCL and Ni-NTA affinity precipitates derived from 293T
81 cells transfected with Flag-TRIP4 and the indicated Myc-RNF25, WT, or KR His-UB
82 constructs. All experiments were independently performed in triplicate, yielding
83 consistent results.
84

85

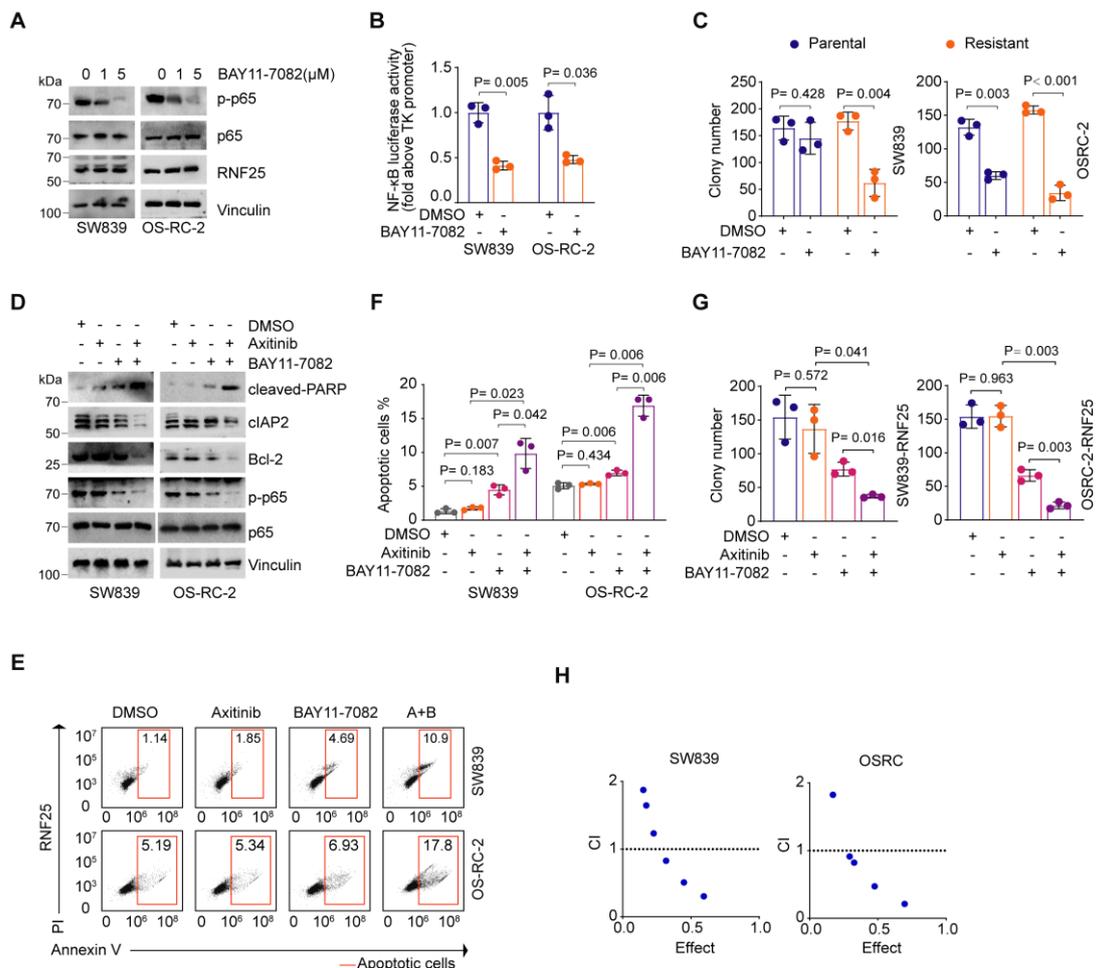

86 **Figure S5. RNF25 promotes poly-ubiquitination of TRIP4 at lysine-135,**
 87 **disrupting its interaction with p65. Related to Figure 4. A** Western blot analysis of
 88 input samples and IP derived from 293T cells transfected with HA- TRIP4 and Flag-
 89 p65 constructs. **B** Western blot analysis of WCL, cytosolic (Cyto.) and nuclear (Nuc.)
 90 fractions from control and TRIP4-knockdown OS-RC-2 cells treated with either an
 91 isotype control or a TNF- α neutralizing antibody. **C, D** Representative images of p65
 92 immunofluorescence in control and TRIP4-knockdown OS-RC-2 cells treated with
 93 either an isotype control or a TNF- α neutralizing antibody (**C**). The nuclear-to-
 94 cytoplasmic fluorescence ratio of p65 was quantified for each cell (**D**) (mean \pm SD, n
 95 = 50, one-way ANOVA). Scale bar, 10 μ m. **E** Western blot analysis of input samples
 96 and anti-p65 immunoprecipitates derived from control and TRIP4-knockdown SW839
 97 cells. All experiments were independently performed in triplicate, yielding consistent
 98 results.

99

100 **Figure S6. BAY11-7082 directly binds RNF25, reversing RNF25-mediated**
 101 **apoptosis suppression. Related to Figure 6. A** Dose-response survival curves of
 102 RNF25-overexpressing SW839 (left) and OS-RC-2 (right) cells exposed to increasing
 103 concentrations of BAY11-7082 (mean±SEM, n = 3). **B, C** Colony formation assays
 104 were performed in control and RNF25-overexpressing SW839 and OS-RC-2 cells
 105 treated with DMSO or BAY11-7082 (0.1 μM). Representative colonies are shown in
 106 (B), with quantification data shown in (C) (mean±SD, n = 3, two-tailed unpaired
 107 Student's *t*-test). **D** Dose-response survival curves of control and RNF25-knockdown
 108 SW839 (left) and OS-RC-2 (right) cells exposed to increasing concentrations of
 109 BAY11-7082 (mean±SEM, n = 3). **E, F** Colony formation assays were performed in
 110 control and RNF25-knockdown SW839 and OS-RC-2 cells treated with DMSO or
 111 BAY11-7082 (0.1 μM). Representative colonies are shown in (E), with quantification
 112 data shown in (F) (mean±SD, n = 3, two-tailed unpaired Student's *t*-test). **G, H**

113 Binding affinity measured by isothermal titration calorimetry (ITC) between RNF25,
 114 MLN120B (G), and BMS-345541 (H). I Dose-response survival curves of RNF25-
 115 overexpressing SW839 (left) and OS-RC-2 (right) cells exposed to increasing
 116 concentrations of MLN120B (mean±SEM, n = 3). J, K Colony formation assays were
 117 performed in control and RNF25-overexpressing SW839 and OS-RC-2 cells treated
 118 with DMSO or MLN120B (10 μM). Representative colonies are shown in (J), with
 119 quantification data shown in (K) (mean±SD, n = 3, two-tailed unpaired Student's *t*-
 120 test). L Dose-response survival curves of RNF25-overexpressing SW839 (left) and
 121 OS-RC-2 (right) cells exposed to increasing concentrations of BMS-345541 (mean±
 122 SEM, n = 3). M, N Colony formation assays were performed in control and RNF25-
 123 overexpressing SW839 and OS-RC-2 cells treated with DMSO or BMS-345541 (5
 124 μM). Representative colonies are shown in (M), with quantification data shown in (N)
 125 (mean±SD, n = 3, two-tailed unpaired Student's *t*-test). All experiments were
 126 independently performed in triplicate, yielding consistent results.

127

128 **Figure S7. Combination of BAY11-7082 and axitinib as a strategy to combat**
 129 **axitinib resistance. Related to Figure 6. A** Western blot analysis of WCL derived
 130 from SW839 and OS-RC-2 cells treated with DMSO or BAY11-7082 for 24 hours. **B**
 131 Dual luciferase reporter assays were performed in SW839 and OS-RC-2 cells treated

132 with DMSO or BAY11-7082 (1 μ M) for 24 hours (mean \pm SD, n = 3, two-tailed
133 unpaired Student's *t*-test). **C** Quantification of colony formation assays in parental and
134 resistant SW839 and OS-RC-2 cells treated with DMSO or BAY11-7082 (0.1 μ M)
135 (mean \pm SD, n = 3, two-tailed unpaired Student's *t*-test). **D** Western blot analysis of
136 WCL derived from SW839 and OS-RC-2 cells treated with DMSO, axitinib (20 μ M),
137 BAY11-7082 (1 μ M), or a combination of axitinib and BAY11-7082 for 24 hours. **E**,
138 **F** Annexin V/7-AAD-FC analysis of SW839 and OS-RC-2 cells treated with DMSO,
139 axitinib (20 μ M), BAY11-7082 (1 μ M), or a combination of axitinib and BAY11-
140 7082 for 24 hours (**E**), with quantification data shown in (**F**) (mean \pm SD, n = 3, two-
141 tailed unpaired Student's *t*-test). **G** Quantification of colony formation assays in
142 RNF25-overexpressing SW839 and OS-RC-2 cells treated with DMSO, axitinib,
143 BAY11-7082, or a combination of axitinib and BAY11-7082 (mean \pm SD, n = 3, two-
144 tailed unpaired Student's *t*-test). **H** Combination Index (CI) plot of axitinib and
145 BAY11-7082 treatment of SW839 (left) and OS-RC-2 (right) cells. SW839 and OS-
146 RC-2 cells were co-treated with 1 μ M BAY11-7082 and different concentrations of
147 axitinib for 24h, and the viability of the cells was measured by the MTT assay.
148 Combination index (CI) values were calculated by the Chou and Talalay method,
149 using the CompuSyn Software, version 1 (ComboSyn, Inc.). The data points below or
150 above the line indicate synergistic or antagonistic drug interactions, respectively. All
151 experiments were independently performed in triplicate, yielding consistent results.

152

153 **Supplementary Tables**154 **Table S1. Sequences of RT-qPCR primers, Related to Figure 2, Figure 3 and**155 **Figure 5 and Figure S1 and Figure S3.**

Name	Species	Sequence of forward primer	Sequence of reverse primer
<i>18S rRNA</i>	Homo sapiens	GAGGTTCGAAGACGATCAGA	TCGCTCCACCAACTAAGAA C

156

157 **Table S2. Antibodies**

Name	Source	Catalog Number	RRID
Rabbit polyclonal anti-RNF25	Proteintech	Cat# 24536-1-AP	RRID: AB_2879594
Rabbit polyclonal anti-TRIP4	Proteintech	Cat# 12324-1-AP	RRID: AB_10646482
Rabbit polyclonal anti-cIAP2	Proteintech	Cat# 24304-1-AP	RRID: AB_2879485
Rabbit polyclonal anti- Bcl-2	Proteintech	Cat# 12789-1-AP	RRID: AB_2227948
Rabbit polyclonal anti-Caspase 3/p17/p19	Proteintech	Cat# 19677-1-AP	RRID: AB_10733244
Rabbit polyclonal anti-Cleaved-PARP1	Zenbio	Cat# 380374;	N/A

Rabbit polyclonal anti- IκBα	Cell Signaling Technology	Cat# 4812;	RRID: AB_10694416
Rabbit monoclonal anti- Phospho-IκBα (Ser32)	Cell Signaling Technology	Cat# 2859;	N/A
Mouse monoclonal anti-p65	ABclonal	Cat# A18210;	RRID: AB_2861986
Mouse monoclonal anti-p65	Santa Cruz	Cat# sc-8008X;	RRID: AB_628017
Rabbit monoclonal anti- Phospho-NF-κB p65/RelA-S536	ABclonal	Cat# AP1294;	RRID: AB_3099756
Rabbit polyclonal anti- Phospho-IKKα/β (Ser176/180) (16A6)	Cell Signaling Technology	Cat# 2697S;	RRID: AB_2079382
Mouse monoclonal LRPPRC	Santa Cruz	Cat# sc-166178;	RRID: AB_2137453
Mouse monoclonal Vinculin	Santa Cruz	Cat# sc-73264;	RRID: AB_1131292
Rabbit monoclonal anti- Ubiquitin (linkage-specific K27)	Abcam	Cat# ab181537	RRID: AB_2713902
Rabbit monoclonal anti- Ubiquitin (E4I2J)	Cell Signaling Technology	Cat# 43124;	RRID: AB_2799235
Rabbit monoclonal anti-His-tag	Proteintech	Cat# 10001-0-AP;	RRID: AB_11232228
Anti-DDDDK-tag mAb-HRP-DirecT	MBL	Cat# M185-7;	N/A
Mouse monoclonal anti-c-Myc	Santa Cruz	Cat# sc-40;	RRID: AB_627268
Rabbit monoclonal anti-HA-tag	ABclonal	Cat# AE105;	RRID: AB_2943030

HRP Goat Anti-Rabbit IgG (H+L)	ABclonal	Cat # AS014;	N/A
HRP Goat Anti-Mouse IgG (H+L)	ABclonal	Cat # AS003;	N/A
