

Supplementary Figure S1 Full panel images of HCT116 *PTEN*^{+/+} and *PTEN*^{-/-} cells with Stattic treatment. Images were taken at 3-hour intervals for a total of 69 hours.

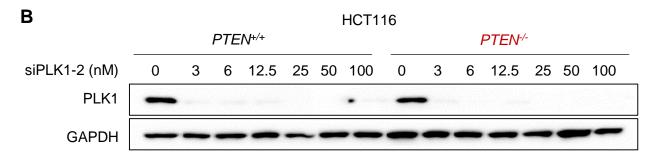

Supplementary Figure S2 Quantification of the cell population with DNA content bigger than 4N.

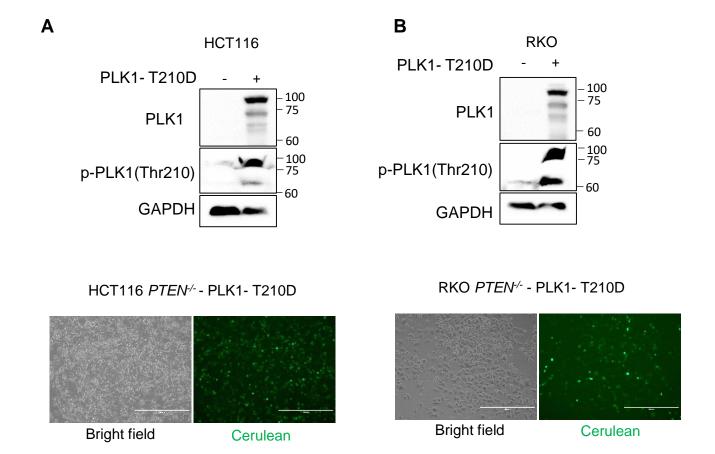

Supplementary Figure S3 Effects of PI3K/mTOR/AKT pathway on STAT3 signal in PTEN-deficient CRC cells. PTEN-isogenic HCT116 cells were treated with or without STAT3 inhibitor (Stattic), PI3K/mTOR inhibitor (LY294002), and mTOR inhibitor (Rapamycin) for 24 h and Western blots were conducted with total and phosphorylated antibodies for each protein.

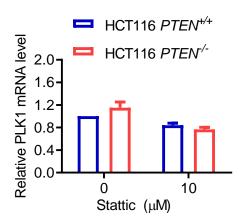

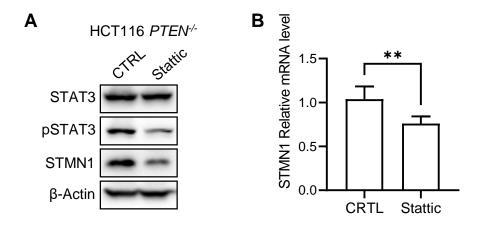

Supplementary Figure S4 Immunoblots showing the siPLK1-1 (A) and siPLK1-2 (B) knockdown efficiency in PTEN-isogenic HCT116 cells.

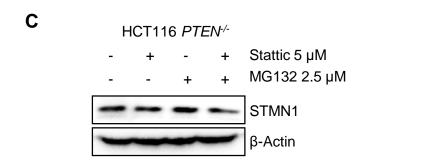

Supplementary Figure S5 Immunoblots and immunofluorescence images showing the Overexpression of PLK1^{T210D}, a constitutively active form of PLK1, in *PTEN*^{-/-} HCT116 cells (A) and in *PTEN*^{-/-} RKO cells (B).

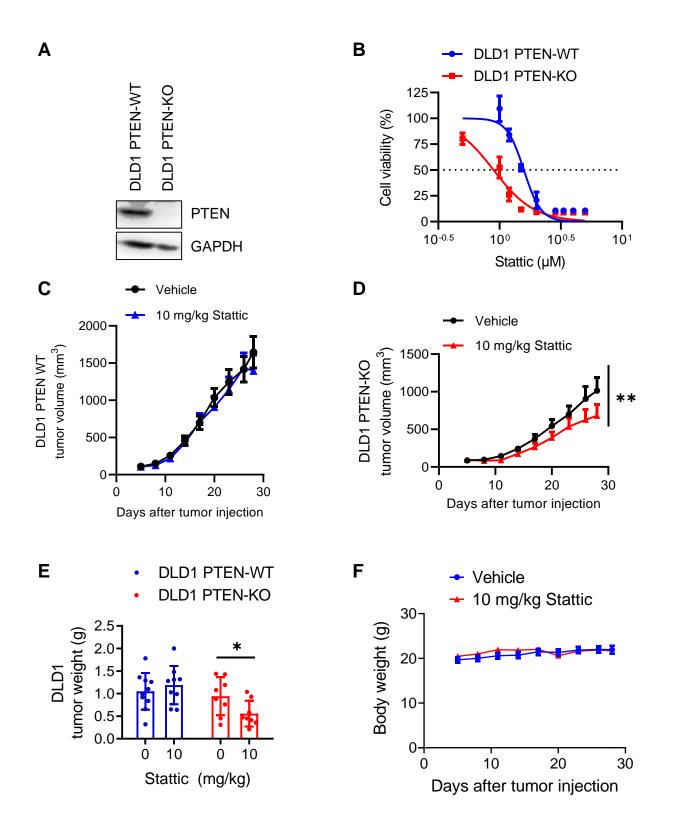

Supplementary Figure S6 PLK1 mRNA level in HCT116 $PTEN^{+/+}$ and $PTEN^{-/-}$ cells with 10 μ M Stattic treatment

Supplementary Figure S7 The role of STAT3 in the regulation of STMN1. PTEN-deficient HCT116 cells were treated with or without Stattic for 24 h and the protein level (A) and mRNA level (B) of STMN1 were assessed. Data are presented as mean \pm SD (n = 3 independent experiments), **P < 0.01 between two indicated bars (unpaired t test). C.PTEN-deficient HCT116 cells were treated with Stattic or MG132 (proteasome inhibitor) alone or combination for 6 h and the protein level of STMN1 was assessed.

Supplementary Figure S8 Validation of the synthetic lethality in DLD1 PTEN-isogenic CRC cell pair. A. PTEN wildtype (WT) and knockout (KO) DLD1 cell lines generated by CRISPR/Cas9 was validated with Western blots of PTEN status. B. Differential drug sensitivity of Stattic on PTEN-isogenic DLD1 cell lines. Data are presented as mean \pm SD (n = 3 independent experiments), C-E. In vivo effects of Stattic on PTEN-WT and KO DLD1 tumor xenografts. F. Effect of Stattic on mouse body weight. Data are presented as mean \pm SD. *P < 0.05, **P < 0.01 between two indicated curves (two-way ANOVA test).
