

Figure S1. The expression of glycolysis related genes were decreased in both diabetic kidney and DKD patients

A. The protein levels of PKM2 and HK2 in DKD mice or DKD patients group by IHC assay (n=6), scale bar=50 μ m; B. Immunostained E-cadherin (red) and PKM2 (green), and counterstained with DAPI (blue) by IF staining in db/m and db/db group (n=6), scale bar=50 μ m.

Figure S2. Supplemental lactate promotes renal fibrosis in db/db mice.

A. Schematic illustration of lactate administration in the db/db group; B. The lactate concentration in the db/m, db/db, db/m+lactate (Lac) and db/db + lactate (Lac) group (n=8); C. Representative images of Masson staining, Sirius red and IHC staining (α SMA, Vimentin and FN) (scale bar=50 μ m) in db/m, db/db, db/m + lactate and db/db + lactate (Lac) groups (n=6); D. Protein levels of α SMA, Vimentin and FN in db/m, db/db, db/m + lactate and db/db + lactate (Lac) groups by Western blot (n=6). Data represent the mean \pm SD from three independent experiments. **P<.01 versus db/db group by one-way ANOVA. **P<.01 versus db/m group (D) or Control group (F) by Student's t-test.

Figure S3. Inhibition of lactate attenuates renal fibrosis in db/db mice.

A. Illustrative overview of the FX-11 intervention strategy in db/db mice; B. The lactate concentration in the db/m, db/db, db/m + FX-11 and db/db + FX-11 groups (n=8); C. Representative images of Masson staining, Sirius red and IHC staining (α SMA, Vimentin and FN) (scale bar=50 μ m) in db/m, db/db, db/m + FX-11 and db/db+FX-11 groups (n=6); D. Protein levels of α SMA, Vimentin and FN in db/m, db/db, db/m + FX-11 and db/db + FX-11 groups by Western blot (n=6). Data represent the mean \pm SD from three independent experiments. **P<.01 versus db/db group by one-way ANOVA.

Figure S4. PKM2 deficiency alleviates renal fibrosis during DKD.

A. The lactate concentration in HK-2 cells in the Control, HG, HG + siPKM2 and HG + siHK2 group (n=3); B-C. Protein levels of FN and α SMA in Control, HG and HG + siPKM2 group in HK-2 cells by western blot, with semi-quantitative analyses (n=3); D. Schematic illustration of PKM2 deficiency in the db/db group; E. Representative images of Masson, Sirius red staining and IHC staining (α SMA and FN) (scale bar=50 μ m) in db/m, db/db, and db/db + shPKM2 groups (n=6); F. Immunostained E-cadherin (red) and FN (green), and counterstained with DAPI (blue) by IF staining in db/m, db/db, and db/db + shPKM2 groups (n=6), scale bar=50 μ m; G. Protein levels of FN and α SMA in db/m, db/db, and db/db + shPKM2 groups by western blot, with semi-quantitative analyses (n=6). Data are presented as mean \pm standard deviation from three independent experiments. **P<.01 versus HG (A, B) or db/db group (G) by one-way ANOVA.

Supplemental Table S1

Table S1. Primers for RT-qPCR.

Primer name		Sequence
Has-PKM2	Sense	ATGGCTGACACATTCCCTGGAGC
	Anti-sense	CCTTCAACGTCTCCACTGATCG
Has-HK2	Sense	GAGTTGACCTGGATGTGGTTGC
	Anti-sense	CCTCCATGTAGCAGGCATTGCT
Has-WNK1	Sense	CAGTGTGGAACCAGAGGGTGAT
	Anti-sense	TTTGCTGTGGCATGGAAGACGC
Has-RUNX1	Sense	CCACCTACCACAGAGCCATCAA
	Anti-sense	TTCACTGAGCCGCTCGGAAAAG
Hsa-DAPK2	Sense	GCACCACAATGTCATCACGCTG
	Anti-sense	CCTCACTCAGTGACTCCTCTG
hsa- β -actin	Sense	CCTGGCACCCAGCACAAT
	Anti-sense	GCTGATCCACATCTGCTGGAA

Supplemental Table S2

Table S2. Primers for ChIP-qPCR.

Primer name		Sequence
Has-WNK1	Sense	GCGCGCGTTCCCTCTCAGT
	Anti-sense	CCAGCGGGGCTGAACTTCT
Has-RUNX1	Sense	AGGAGGC GGAGGAGGAGAG
	Anti-sense	TTCTGGGGAGGAGGAGCGT
Has-DAPK2	Sense	GCGCCTGC GGAGTGAGAGA
	Anti-sense	CCCACGCCCGTCTCCTTTA
