

Supplementary information

Supplementary Tables

Supplementary Table S1. Upregulated genes in AGS cells following galectin-1 silencing

Transcriptomic profiling was performed using microarray analysis in AGS cells transfected with galectin-1 siRNA. Genes significantly upregulated compared with control are listed. Differentially expressed genes were defined using a cut-off of $|\text{fold change}| \geq 2.0$ (linear scale) and adjusted $p < 0.05$.

Gene Symbol	Gene Name	Fold Change (linear)
Response to wounding		
CXCL11	chemokine (C-X-C motif) ligand 11	2
CXCL9	chemokine (C-X-C motif) ligand 9	2
CTGF	connective tissue growth factor	2
ENG	endoglin	2
Biological adhesion		
CDH15	cadherin 15, type 1, M-cadherin	2
TGFBI	transforming growth factor, beta-induced	3.3
BMP1	bone morphogenetic protein 1	2
Cell motility		
CXCL12	chemokine (C-X-C motif) ligand 12	2.5
NRP2	neuropilin 2	2.5
Cell migration		
CDH2	cadherin 2, type 1, N-cadherin	2
DRD2	dopamine receptor D2	2
Immune response		
IL1F10	interleukin 1 family, member 10	2
IL1RN	interleukin 1 receptor antagonist	2
Positive regulation of signal transduction		
LGALS9	lectin, galactoside-binding, soluble, 9	2

Supplementary Table S2. Downregulated genes in AGS cells following galectin-1 silencing

Transcriptomic profiling was performed using microarray analysis in AGS cells transfected with galectin-1 siRNA. Genes significantly downregulated compared with control are listed. Differentially expressed genes were defined using a cut-off of $|\text{fold change}| \geq 2.0$ and adjusted $p < 0.05$.

Gene Symbol	Gene Name	Fold Change (linear)
Response to wounding		
NOX1	NADPH oxidase 1	-2
CXCL1	chemokine (C-X-C motif) ligand 1	-2
CXCL2	chemokine (C-X-C motif) ligand 2	-2
TGFB3	transforming growth factor, beta 3	-2
Blood vessel morphogenesis		
AMOT	angiomin	-2
PGF	placental growth factor	-2
Glucose metabolic process		
HK2	hexokinase 2 pseudogene; hexokinase 2	-2
LDHA	lactate dehydrogenase A	-2
PDK1	pyruvate dehydrogenase kinase, isozyme 1	-2.5
Cell activation		
NDRG1	N-myc downstream regulated 1	-2.5
Defense response		
CEBPE	CCAAT/enhancer binding protein (C/EBP), epsilon	-2
Regulation of cell proliferation		
SOX2	SRY (sex determining region Y)-box 2	-2
CGREF1	cell growth regulator with EF-hand domain 1	-2.5
DHRS2	dehydrogenase/reductase (SDR family) member 2	-2
FOXO4	forkhead box O4	-2
TGM2	transglutaminase 2	-2
NANOG	Nanog homeobox pseudogene 8; Nanog homeobox	-2.5
Negative regulation of signal transduction		
DDIT4	DNA-damage-inducible transcript 4	-2.5
IGFBP5	insulin-like growth factor binding protein 5	-2.5
KLF9	Kruppel-like factor 9	-2

Supplementary Table S3. Primer sequences used in this study

Gene name	Forward primer (5'→3')	Reverse primer (5'→3')
<i>LGALS1</i>	CTCTCGGGTGGAGTCTTCTG	ACGAAGCTCTTAGCGTCAGG
<i>SOX2</i>	AAAACAGCCCGGACCGCGTC	CTCGTCGATGAACGGCCGCT
<i>NANOG</i>	GGCGTCGGGATCGGATAAATA	GAAGAGGAGAGACAGTCTCCGT
<i>CXCL9</i>	GCAAGGAACCCAGTAGTGA	TTTGGCTGACCTGTTTCTCC
<i>CXCL12</i>	TCAGCCTGAGCTACAGATGC	CTTTAGCTTCGGGTCAATGC
<i>BMP1</i>	GGAGAGACCCTGCAAGACAG	CGATAGGCTCAGGGAGTTTG
<i>CDH2</i>	GACAATGCCCTCAAGTGTT	CCATTAAGCCGAGTGATGGT
<i>LGALS9</i>	CCTTTGACCTCTGCTTCCTG	AAACAGACAGGCTGGGAGAA
<i>TGFB1</i>	AACCCACAACGAAATCTATG	GTGCTGCTCCACTTTTAACT
<i>NRP2</i>	TCCACTGCTGACAAGGTTTG	ACTGGGGCTCCAGAGGTATT
<i>CXCL1</i>	AGGGAATTCACCCCAAGAAC	CACCAGTGAGCTTCCTCCTC
<i>LDHA</i>	TGGGAGTTCACCCATTAAGC	AGCACTCTCAACCACCTGCT
<i>NDRG1</i>	CGAGAGCTACATGACGTGGA	AAGAGGGGGTTGTAGCAGGT
<i>IGFBP5</i>	AAGAAGCTGACCCAGTCCAA	GAATCCTTTGCGGTCACAAT
<i>NOX1</i>	GGATGATCGTGACTCCCACT	TTTGGATGGGTGCATAACAA
<i>KLF9</i>	TCGCGTTTACAAGTGTCGAG	CTTCAGCTTCGGTTTTCCAG

Supplementary Figures

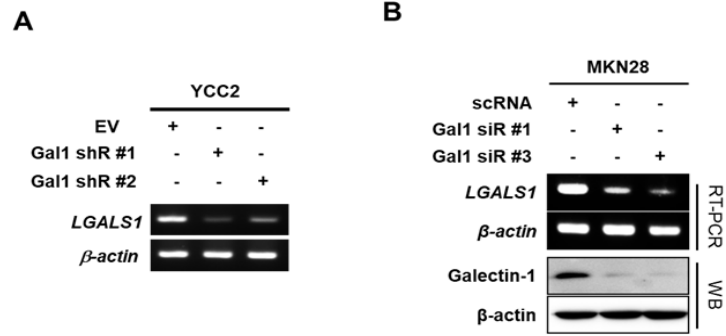

Supplementary Figure S1. Detection of galectin-1 expression in gastric cancer cell lines. mRNA and protein expression levels of galectin-1 were examined in 11 gastric cancer cell lines by RT-PCR and western blotting.

Supplementary Figure S2. Suppression of galectin-1 expression by siRNAs in gastric cancer cell lines. AGS, YCC2, and SNU-668 cells were transfected with scrambled control (scrNA) or two different galectin-1 siRNAs (Gal1 siR#1 and Gal1 siR#3). Cells were harvested 48 h post-transfection, and galectin-1 mRNA and protein levels were analyzed by RT-PCR and western blotting.

A**B**

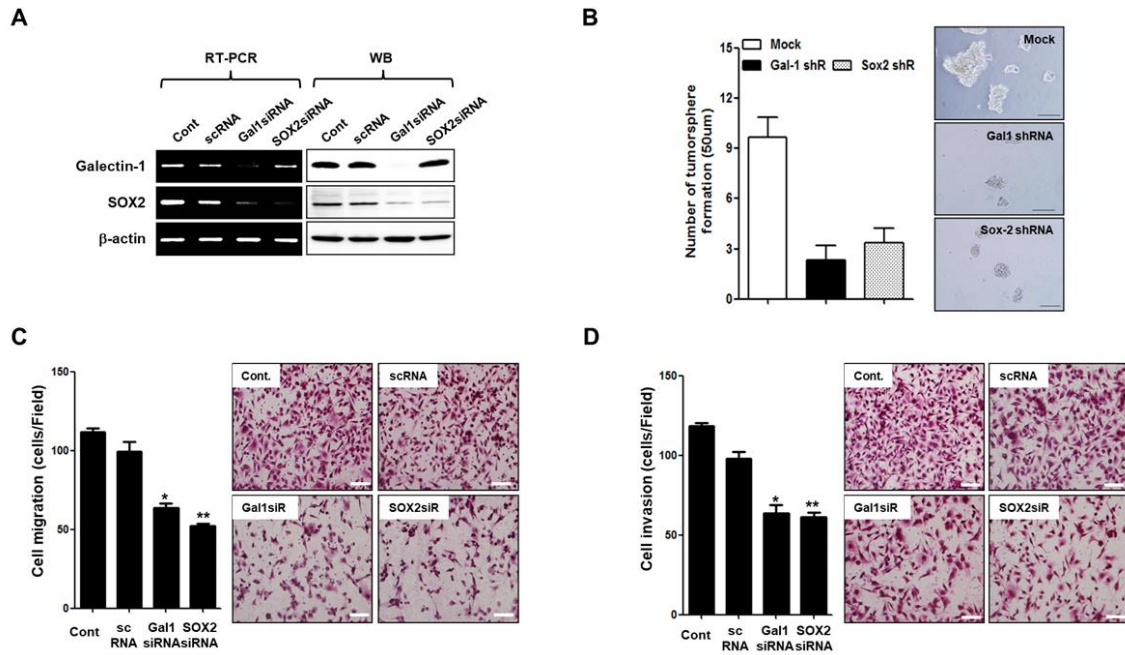

Supplementary Figure S3. Effect of galectin-1 silencing on migration and invasion of gastric cancer cell lines. Transwell assays were performed to evaluate (A) invasion and (B) migration in AGS, YCC-2, and SNU-668 cells transfected with scrambled control (scRNA) or galectin-1 siRNAs. Representative images (right) and quantification (left) are shown. In each group, five random fields were imaged and counted. Scale bar, 5 μ m. p-values were calculated using Student's t-test (* $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$).

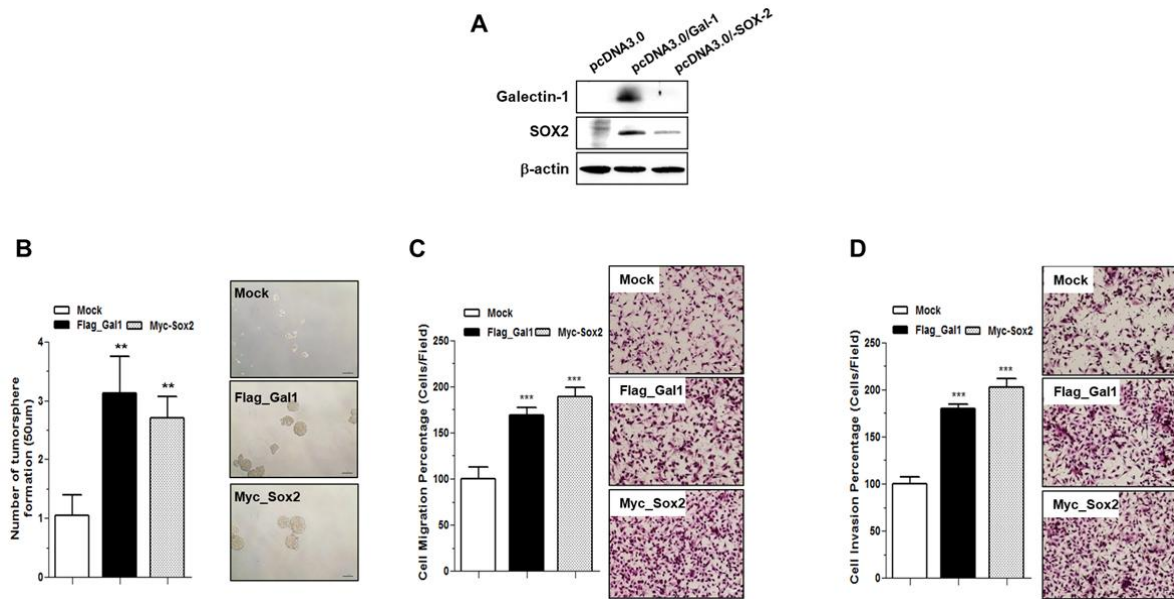

Supplementary Figure S4. Suppression of galectin-1 expression by shRNA or siRNA in gastric cancer cell lines. (A) YCC-2 cells were transfected with empty vector (EV) or two independent galectin-1 shRNAs. mRNA expression levels of galectin-1 were measured by RT-PCR after 48 h. (B) MKN28 cells were transfected with scrambled control (scRNA) or two independent galectin-1 siRNAs. Galectin-1 mRNA and protein levels were assessed by RT-PCR and western blotting after 48 h.

Supplementary Figure S5. Overexpression of galectin-1 in gastric cancer cells. (A) SNU601, SNU216, and SNU719 cells were transfected with empty vector (pcDNA_Flag) or galectin-1 overexpression vector (pcDNA_Flag-Gal1). mRNA and protein levels of galectin-1 were measured by RT-PCR and western blotting after 48 h. (B) MKN28 cells were transfected with empty vector (pLECE3) or galectin-1 overexpression vector (pLECE3-Gal1). Galectin-1 expression was confirmed by RT-PCR and western blotting after 48 h.

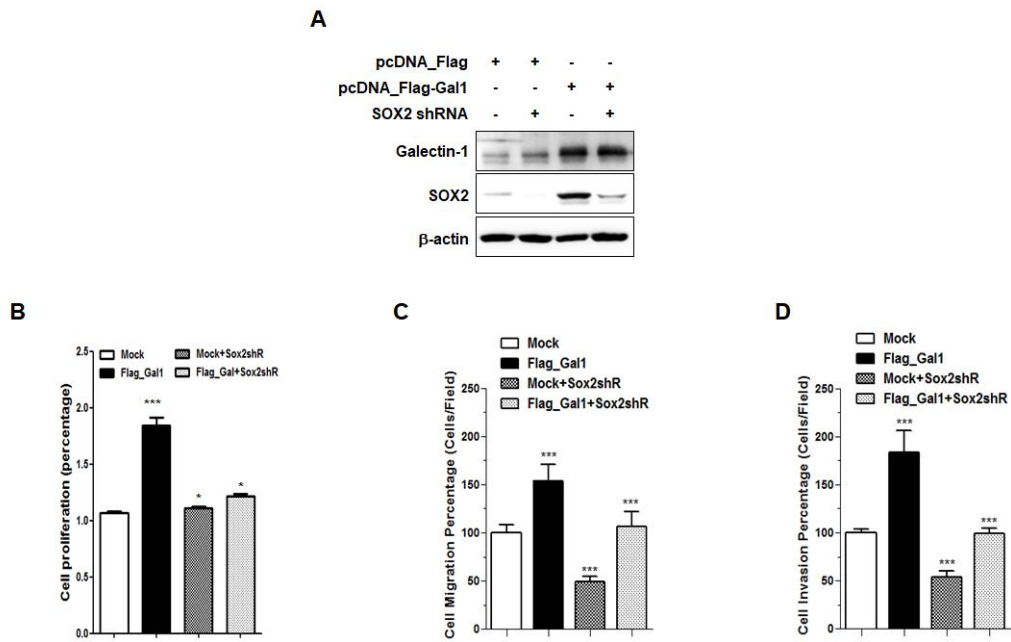

Supplementary Figure S6. Effects of galectin-1 and SOX2 knockdown on stemness and motility in AGS gastric cancer cells. (A) RT-PCR and western blot analysis of galectin-1 and SOX2 expression in AGS cells transfected with scRNA, galectin-1 siRNA, or SOX2 siRNA for 48 h. (B) Tumorsphere formation assay of AGS cells transfected with galectin-1 or SOX2 siRNA. Representative images (left) and quantification of sphere number (right) are shown (magnification, $\times 100$; mean \pm SD, n = 3). Scale bar = 50 μ m. (C–D) Transwell migration (C) and invasion (D) assays of AGS cells transfected with galectin-1 or SOX2 siRNA. Representative images (right) and quantification (left) are shown. Scale bar = 50 μ m. Statistical significance was determined using Student's t-test (*p < 0.05; **p < 0.01; ***p < 0.001).

Supplementary Figure S7. Effects of galectin-1 and SOX2 overexpression on stemness and motility in AGS gastric cancer cells. (A) Western blot analysis of galectin-1 and SOX2 protein expression in AGS cells transfected with empty vector, pcDNA3.0-Flag-Galectin-1, or pcDNA3.0-Myc-SOX2. (B) Tumorsphere formation assay of AGS cells following overexpression of galectin-1 or SOX2. Representative images (left) and quantification of sphere number (right) are shown (magnification, $\times 100$; mean \pm SD, $n = 3$). Scale bar = 50 μm . (C–D) Transwell migration (C) and invasion (D) assays of AGS cells overexpressing galectin-1 or SOX2. Representative images (right) and quantification (left) are shown. Scale bar = 50 μm . Statistical significance was determined using Student's t-test (* $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$).

Supplementary Figure S8. Effects of galectin-1 and SOX2 overexpression on stemness in AGS gastric cancer cells. (A) Western blot analysis of galectin-1, SOX2 and CD44 protein expression in AGS cells transfected with empty vector, pcDNA3.0-Flag-Galectin-1, or pcDNA3.0-Myc-SOX2. (B) Quantification of ALDH activity in AGS cells overexpressing vector, pcDNA3.0-Flag-Galectin-1, or pcDNA3.0-Myc-SOX2. Statistical significance was determined using Student's t-test (** $p < 0.01$; *** $p < 0.001$).

Supplementary Figure S9. SOX2 silencing abrogates the proliferative and motility effects induced by galectin-1 overexpression in AGS gastric cancer cells. (A) Western blot analysis of SOX2 and galectin-1 expression in AGS cells co-transfected with empty vector, galectin-1 overexpression vector, and/or SOX2 shRNA. (B) Cell proliferation was assessed using the WST assay in the indicated AGS cell groups. Data are presented as mean \pm SD (n = 3). (C–D) Transwell migration (C) and invasion (D) assays were performed in AGS cells co-transfected with galectin-1 overexpression vector and SOX2 shRNA. Representative images and quantification are shown. Scale bar = 50 μ m. Statistical significance was determined using Student's t-test (*p < 0.05; **p < 0.01; ***p < 0.001).

Supplementary Figure S10. Nuclear co-localization of galectin-1 and SOX2 in gastric cancer cells.

AGS cells were transfected with scRNA or galectin-1 siRNA #1. AGS cells were transfected with scRNA or galectin-1 siRNA #1. IF for Galectin-1 (green) and SOX2 (red) was performed and visualized using confocal microscopy. Nuclei were stained with 4',6-diamidino-2-phenylindole (blue). Galectin-1/SOX2, merged image of Galectin-1 and SOX2; Galectin-1/SOX2/DAPI, merged image of Galectin-1, SOX2, and DAPI. Image magnification, $\times 400$; scale bar, 20 μm .

Supplementary Figure S11. Analysis of SOX2 O-GlcNAcylation under wild-type or mutant galectin-1 expression. Gastric cancer cells were transfected with wild-type galectin-1 or mutants (E71A or R73A). Cell lysates were subjected to immunoprecipitation using an anti-Myc antibody, followed by immunoblotting with an anti-O-GlcNAc antibody to assess O-GlcNAcylation levels of SOX2.

Supplementary Figure S12. Representative hematoxylin and eosin (H&E) staining and immunohistochemical detection of Galectin-1 and SOX2 illustrating four distinct expression patterns. Three formalin-fixed, paraffin-embedded gastric cancer cases per group are shown at high magnification. Scale bar, 100 μm .
